Combo Printer SCP700

Thermal Receipt Printer, Impact Slip Printer Combination

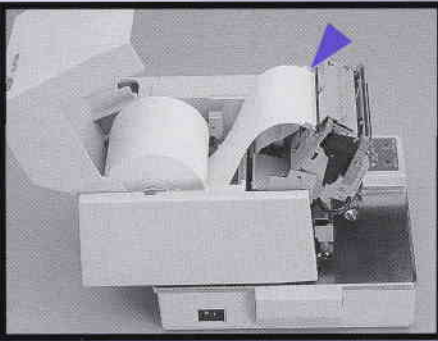

- High speed thermal receipt printer and impact slip printer integrated into a single package.
- Cost effective, full capability POS printer.
- Prints receipt at up to 16.7 line/sec.
- Flat bed printing of restaurant checks, credit card forms, and other multi part documents.
- Small foot print occupies minimal counter space.
- Flexible dual interface allows multiple system configuration.
- Optional integrated customer display available.
- Multiple software emulation allows use with many existing applications.

Star Micronics is pleased to introduce the worlds first truly flexible combo printer, the SCP700. Optional dual interface with data pass through functions make possible system configurations previously unavailable. These configurations, ranging from a simple combo printer alone, up to a complete virtual POS device, including thermal receipt and impact slip printer, customer display, dual cash drawer, MICR Reader, Mag Stripe Reader, Bar Code Scanner and Signature Capture/Pin Pad, all controllable through a single serial or bidirectional parallel interface.

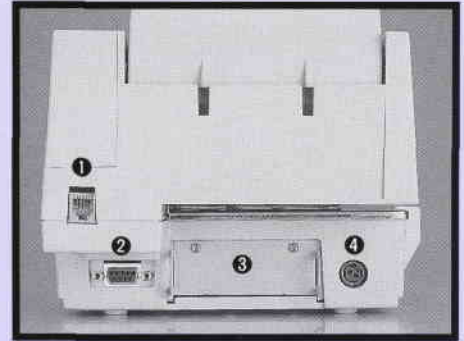

■ **Near End Sensor**
(3 position Adjustable)

■ **Easy Paper loading**

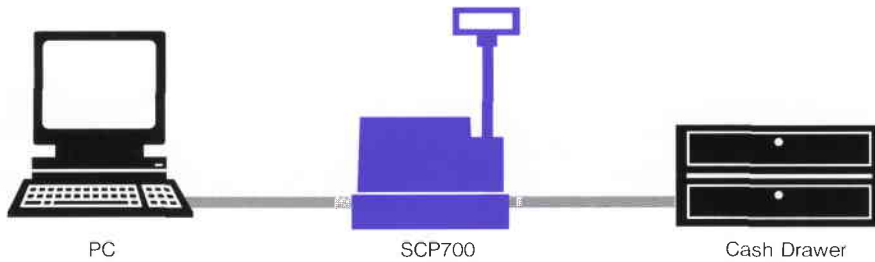

① Cash Drawer Support(6 pin Modular)
② Standard RS-232C Interface(D-Sub 9 pin)
③ Optional Interface Slot ④ Power Supply Connector

SCP700 has an extremely flexible interface and can be connected in many ways.

■ **Installation examples**

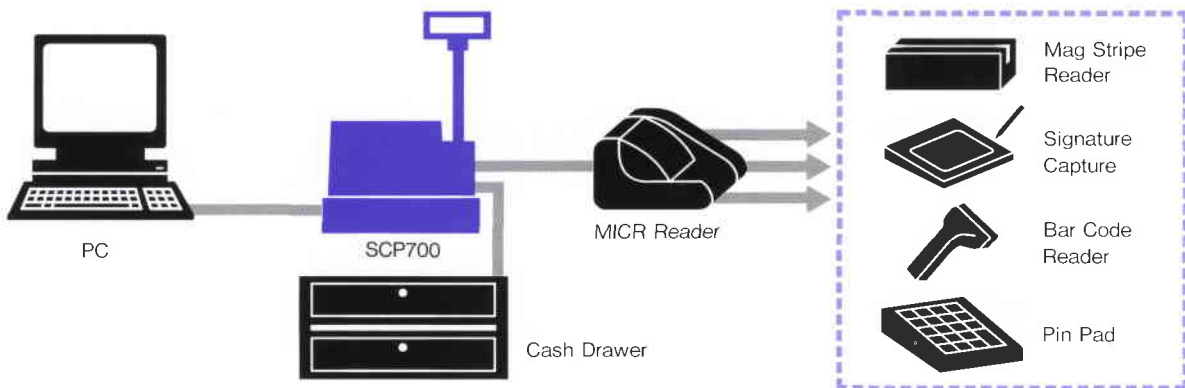

① **Multi station printer configuration**

The SCP700 printer is perfect for typical POS systems. The Combo printer offers high speed receipt printing, multi part document printing, integrated customer display, and support for up to two cash drawers from a single interface connection.

② **Data pass through/Peripheral work group configuration**

Adding an optional serial or parallel interface provides a unique Data pass through function. The SCP700 becomes the hub of a complete POS peripheral work group.

③ **Dual Printer configuration**

The dual interface can be used to make the SCP700 to look like two independent printers. This enables the SCP700 to replace two printers in many existing systems without any software modifications.
